*Acknowledgement*

Receipt is acknowledged of the Amendment filed June 25, 2004.

*Reasons for Allowance*

Claims 2-5, 7-15, and 17-28 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: the best prior art of record, Nunomiya et al., taken alone or in combination of other references, does not teach or fairly suggest an input buffer circuit comprising, among other things, a third differential amplifier circuit having a first input coupled to the first differential input terminal and a second input coupled to the second differential input terminal, the third differential amplifier circuit being configured to generate the first logic level signal at the output node when the differential input is provided in accordance with the first digital I/O standard and the common mode component of the input signals is in a second portion of the input operating range (claim 1); a second current mirror circuit having a first terminal coupled to the second terminal of the second input transistor and a second terminal coupled to a complementary output node, wherein the current at the first and second terminals of the second current mirror circuit are proportional to one another (claim 7); and a third differential amplifier circuit receiving the differential input signal between a first input and a second input thereof, the third differential amplifier circuit being enabled in the first input buffer mode to generate the first logic level signal at the output node when the differential input signal is provided in accordance with the first digital I/O standard (claim 17), as set forth in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
